WORK IN PROGRESS

Research in Progress

My most current research has four interrelated spheres of study: paleoecological, historical ecological, and agency-based considerations of the evolution of sociopolitical complexity among ancient societies in the midcontinental and southeastern United States; historical ecological efforts at modeling ancient resource productivity and reconstructing ancient anthropogenic landscapes; microhistorical investigation of households, ancient architecture, planned communities, and built landscapes as expressions of social order in which both cosmological canons of design and vernacular traditions of engineering and construction style contribute to architectural variation; and the history of archaeology as practiced in the United States in the first half of the twentieth century – a time when newly discovered archaeological evidence was used to establish cultural historical meta-narratives that are entrenched on a colonial perspective on Native Americans and still in use today in many regions. These questions are being pursued in the context of my fieldwork and collections-based analyses in western Kentucky (the Jonathan Creek site, associated with the Mississippian Tradition), Cahokia and the American Bottom in Illinois (region with intensive Mississippian occupation), and Wisconsin (the Skare site, a multicomponent site; Aztalan, associated with the Late Woodland and Mississippian Traditions; and the Wisconsin Dugout Canoe Survey project (statewide, spanning the past 4,000 years).
